# Adding Beads On Top of a Button
© Jane Eborall 2013

Work as the pattern states until the button is reached and then pull a loop UP through the hole in the button.

Add given number of beads to the loop.

Take shuttle through the loop after the beads have been added. You will need a largish loop to put the shuttle through.

Make sure the buttons are moved right up to the edge of the hole before tightening the shuttle thread to ensure that the loop is closed completely.

Continue with pattern.
